Osmose MicroPro® Wins 2009 Green Product Award from Building Products Magazine

Griffin, GA, November 20, 2009 – Osmose, Inc., the premier supplier of wood preservative technologies, is a recipient of the Building Products Magazine **Green Product Award** for the MicroPro preservative technology. The winners were judged on their green and sustainable attributes including, but not limited to, energy efficiency, resource efficiency, and/or health and comfort. The MicroPro wood preservative technology, along with other products, was reviewed by a select panel of judges including builders, remodelers, and architects. The MicroPro technology represents one of the best new products that contributes to green-built homes and that brings the most value to residential construction professionals employing green building practices.

As an ever increasing number of green products are being offered, Osmose is pleased to be among a select few to win the Building Products Magazine **Green Product Award**. Some of the other winners include The Dow Chemical Co., Trane, Mitsubishi Electric Co., Benjamin Moore & Co., and Whirlpool Corporation. Wood products treated with MicroPro preservatives can be used in above ground, ground contact, and fresh water immersion. By selecting wood treated with the MicroPro preservative technology, Architects, Specifiers, Homebuilders, and Contractors are using a product that offers real value to their construction project.

The Green Product Awards will be featured in the Fall 2009 issue of Building Products magazine and on the magazine's web site, ebuild.com. The winners also will be posted on ecohomemagazine.com.
